DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1 is rejected under 35 U.S.C. 102(b) as being anticipated by European Patent Publication EP 0 730 044A2 (Utsuml).

Utsuml discloses a coating comprising boron-aluminum-nitride, wherein said coating can be applied to ceramic substrates. The language of "for ceramic fibers" is drawn to the future intended use of the claimed coating and does not add patentable weight. Accordingly, the teachings of Utsuml anticipate the invention as claimed in present claim 1. See entire document and for example, abstract.

Claim Rejections - 35 USC § 103

- 1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
- 2. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Japanese Patent Publication abstract, JP 06087657 (the abstract) in view of European Patent Publication EP 0 730 044 A2 (Utsuml), as applied above to claim 1.

The abstract teaches a composite material and composition comprising inorganic fiber reinforced ceramic composite having nitride based nanocomposite material. The nanocomposite material comprises nitride of aluminum and boron and has nitride

Application/Control Number: 10/555,048 Page 3

Art Unit: 1794

particles dispersed in the nanocomposite. The abstract does not specifically teach a coating on the ceramic fibers. Utsuml is as set forth above and teaches a boron-aluminum-nitride coating, wherein said coating can be applied to ceramic substrates. It would have been obvious to modify the teachings of the abstract by coating the fibers with a coating as taught by Utsuml with the reasonable expectation of enhancing the bond strength between the fibers and the matrix material. Therefore, the combined teachings in the abstract and Utsuml would have rendered obvious the invention as claimed in present claims 1-5.

3. Claims 3 and 6-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over European Patent Publication EP 0 730 044A2 (Utsuml) in view of Japanese Patent Publication abstract, JP 06087657 (the abstract).

Utsuml is as set forth above and teaches that his coating can be applied to ceramic substrates such as silicon carbide, but does not specifically teach a fibrous substrate. The abstract is as set forth previously and teaches silicon carbide fibers reinforced in a ceramic composite material. It would have been obvious to one of ordinary skill in the art at the time the invention was made to coat the silicon carbide fibers with a boron-aluminum-nitride coating as taught by Utsuml with the reasonable expectation of enhancing bonding at the fiber matrix interface.

Response to Arguments

4. Applicant's arguments with respect to claims 1-5 have been considered but are moot in view of the new ground(s) of rejection.

No claims are allowed.
